

# *SYSTEM CARE PLAN*

## *PERFORMANCE OPTIMIZATION*

*System audits conducted by Pressco Engineers via remote connection*

- **QUALITY** – ensure that inspection settings are optimized for maximum defect detection
- **RELIABILITY** – assess risks to system health and operational effectiveness
- **VALUE** – identify opportunities to improve capabilities and maximize uptime

## Get the most from your Pressco Inspection System!

Maintain your quality standards and operational efficiency with Pressco's System Care Plan. Our remote audit process delivers a proactive, predictive and preventative approach to address any system operation issues prior to a negative impact on production or quality.

Each system audit is conducted by Pressco Engineering via Internet connection, so there's no impact on your production line or your local staff. You receive a detailed report containing our audit findings, highlighting specific risk factors and providing recommendations for improving system performance.

Following your desired schedule (monthly, quarterly, etc.), we'll perform a thorough analysis and assessment of the following:

- **Inspection Image Quality** - focus, clarity, lighting intensity, part centering
- **Production Statistics** - reject rate/causes, false reject analysis
- **Inspection Setup** - part registration and ROI settings, inspection parameters
- **Examination of Log Files** - system log events, Windows event log, system missed statistics
- **System Maintenance** - creation of new Support Package file, verification of latest software rev

### Benefits

- Better defect detection
- Reduced false reject rates
- Software updates to current revision
- Identification of training needs
